EDUCATION

Aston University | 2021 - June 2023

MSc Computer Science with Professional Placement: Distinction

University of Hertfordshire | 2004 - 2007

B. Eng. Automotive Engineering: 2:1

Alexandra Sixth Form | 2000 - 2002

A-Levels in Physics, Geography and AS Level Maths

ADDITIONAL INFO

- ▶ Full clean driving license and own car
- ▶ Certificate in 2D CAD Course from Dudley College (2009)
- ▶ Work and educational references available on request

PROFILE

I am a highly motivated, experienced, Computer Science Masters graduate. Originally from an Engineering Sales background, with developed ability to utilise advanced numeracy and design skills and able to persist in problem solving situations. Transitioning careers into technology, with indispensable work experience gained through my previous roles and engineering placement. Ability to apply business experience and understanding of customer relationships combined with technical skills to provide invaluable solutions. I am keen to demonstrate the skills I have gained, and I am enthusiastic regarding developing my knowledge further.

PROFESSIONAL EXPERIENCE

SOFTWARE DEVELOPER INTERN

Beautiful Canoe | September 2022 – Present

Working as a sole developer on a full stack website project. Using Java for the main code, Docker container systems, PostgreSQL backend. Apache Cocoon framework for the frontend. The project has given me valuable experience in working with these technologies, and a taster of the tenacity needed for future development roles.

TECHNICAL SALES COORDINATOR

VTG Rail UK | 2020 - August 2021

As part of a four-person sales team for rail freight wagon leasing company, main responsibilities included managing the company's internal wagon billing system, by ensuring that invoicing was done in an accurate and timely manner. Creating and amending contractual documentation, and ensuring relevant signatories were present. Also handled the company's marketing activities liaising with an external PR company.

SALES SUPPORT ENGINEER

KUKA Systems UK Ltd | 2016 - 2020

Office based point of contact in a global sales team. Assisting in drafting quotations, pricing up machines, and liaising with customers in the initial stages of enquiries. Experience with Salesforce CRM and representing KUKA UK as the regional key user. Supporting sales team with queries regarding Salesforce, dealing with export documentation and checks, while offering further support to the externally based international sales teams.

SUNGKET PATEL

EXPERIENCED CAREER CHANGER / SOFTWARE ENGINEER

CORE SKILLS TO DATE

- Experience in Java, Javascript, CSS, HTML, Bootstrap, NodeJs, SQL and many more.
- Extensive use of IDEs such as VS Code, IntelliJ IDEA and Eclipse.
- Applying data structures in programs and Object Orientated Programming

MODULES TAKEN IN TP 1

FOUNDATIONS OF OBJECT ORIENTATED DESIGN

Introductory bootcamp module for learning Java. From beginner to intermediate level (Arrays, conditional statements, classes and methods) in order to prepare for curriculum. Coursework involved programming a short text-based discovery adventure game.

DATA STRUCTURES AND ALGORITHMS

Using Java, skills learnt include introduction and application of various data structures, and tasked to apply them practically in a working Grocery Delivery Program. Analysis of algorithms, and assessing time complexities.

SOFTWARE ENGINEERING

Objectives included learning UML diagrams and notations, Object and class diagrams. Use Case diagrams, Agile processes and scrum. Also introduced to software lifecycle stages. Software Design and Architecture. Coursework was to report on how Software Engineering has been adopted in the Automotive Industry.

TEAM PROJECT (TP1 AND TP2)

Working in a team of nine members, the objective was to develop from scratch a multiplayer game using Unity. As well as programming, this module focused on team-based exercises such as organising and minuting regular meetings, presentations.

MODULES TAKEN IN TP 2

SOFTWARE RELIABILITY & TESTING

Module focuses on the use of IntelliJ and Cucumber. Theoretical knowledge on testing techniques, and typical task remit of a software tester. Coursework involves investigating the effectiveness of a testing technique in each situation.

DATABASE SYSTEMS

Learning targets include confident use of SQL, querying databases, and Oracle. Able to select and apply suitable database tools and techniques for addressing a given set of requirements. Coursework includes design and implementing theory and choosing a suitable system with critical evaluation.

HUMAN COMPUTER INTERACTION

Group based module involving knowledge elicitation, presentation and evaluation on a scenario based on shopping experience within a supermarket. The module encourages design from a user's point of view, including class discussions and group decisions on how a system should interface with a wide range of users. Also, investigations into UX design.
